## **macro sas - SUGI 30 Hands-on Workshops Paper 130-30 SAS ...**

Macro variables defined by macro programmers are called user-defined

macro variables. Those defined by the macro processor are called automatic macro variables. You can define and use macro variables anywhere in SAS programs, except within data lines. When a macro variable is defined, the macro processor adds it to one of the program's macro ...

Introduction to**

## **Macro Variables**

We can also declare multiple macro variables and use them at different places in SAS Code. The macro variable does not resolve when they access within single quotes. Hence, we should use double quotes to reference them. ; macro-variable-1 <...macro-variable-n> is the name of one or more SAS macro variables.
