The basic graph will be used to develop  
a sketch of the function with its  
transformations. For the basic function,  $f(x) = x^2$ ,  
its basic graph is just a parabola.

In computer science, graph transformation, or graph rewriting, concerns the technique of creating a new graph out of an original graph algorithmically. It has numerous applications, ranging from software engineering (software construction and also software verification) to layout algorithms and picture generation.
