## Chapter 16

### Evolution Of

Populations  
Section Review 1

evolution occurs only in populations and not in individuals. A single individual cannot

evolve alone; evolution is the process of changing the gene frequencies within a gene pool. Five forces can cause genetic variation and evolution in a population: mutations, natural selection, genetic drift, genetic hitchhiking, and gene flow.

Evolution Of  
Populations  
Section Review 1  
Answer Key

Outline. Overview: The Smallest Unit of Evolution. One common misconception about evolution is that organisms evolve, in a Darwinian sense, during their lifetimes. Natural selection does act on individuals.
