approach for IT. Although cloud computing has become a foundation of digital business, many organizations still struggle to optimize this powerful tool. Gartner estimates that less than one-third of enterprises have a documented cloud strategy.

Cloud Computing | Gartner EA & Tech Innovation Summit 2020

Cloud computing architecture refers to the components and subcomponents required for cloud computing. These components typically consist of a front end platform (fat client, thin client, mobile device), back end platforms (servers, storage), a cloud based delivery, and a network (Internet, Intranet, Intercloud).

3 steps to successful cloud architecture | InfoWorld

There is no enterprise architecture. Enter cloud computing. As I've discussed before, cloud computing is creating an environment in which software components and data collections intertwine to create a complex adaptive system. What this means is that "control" over the design parameters of enterprise computing is starting to be highly distributed among cloud infrastructure providers, service operators and those that build and run applications on those services.

Cloud & the evolution of the enterprise architect - Gigaom

Finally, the cloud architect needs to be an expert in the existing cloud computing technology: public, private, and hybrid, including IaaS, PaaS, and SaaS. You can't build something unless you...
