extremities and SNAGS (sustained natural apophyseal glides) of the spine were first coined by Brian R. Mulligan. Mobilization with movement (MWM) is the concurrent application of sustained accessory mobilization applied by a therapist and an active physiological movement to end range applied by the patient.

Mulligan Concept - Physiopedia

Brian Mulligan originated and developed the concept of combining accessory mobilizations with physiological movements in the extremities (MWMS). In the spine, he promotes the use of natural apophyseal glides (NAGS) and sustained natural apophyseal glides (SNAGS).

The Mulligan Concept of Mobilisation with Movement (MWM) is a unique manual therapy treatment approach combining mobilisation with active movement or function. Fundamentally a patient's pain, restriction or functional loss is eliminated when appropriate mobilisation forces are applied during movement.

Mulligan Concept - Manual Therapy

This sixth edition text contains revised information including Mobilisations with Movement (MWMs) for the shoulder girdle. When applied correctly, they can significantly reduce joint pain and increase movement. They're also highly effective treatments for patients with pain or stiffness of Cx 5/6 and Cx 6/7 origin.
