actually have nothing to do with the outside unit. The problem could be that the power to your furnace and indoor blower has been turned off.

Typically there's a switch located near your furnace. It could be in plain sight or tucked away in a crawl space, closet, or attic.

tripping the breaker or blowing a fuse in the electrical control box when it cycles on.

Repeatedly running the fuse box and changing the fuse is not only cumbersome and time-consuming, but likely also a sign of a greater problem with your cooling system or your electrical circuits.
